Unsafe Rust

Questions

- systems programming language
- compiled
- strongly, statically typed
- affine type system
- low-level access, high-level abstractions
- C-like syntax
- large community
- multi-paradigm
- inspired by: C++, Erlang, Haskell, OCaml, Swift, ...

Patterns

Iterators

Unsafe Rust

Questions

- memory-safe
  - no use-after-free
  - no out-of-bounds accesses
- make data races impossible
- no runtime
- no mandatory garbage collector
- explicit costs
- enforce handling error conditions
- immutable by default
- zero-cost abstractions

Patterns

Iterators

Unsafe Rust

Questions

- systems programming can be scary
- a lot of bugs concern memory safety and data races
- (most) systems language do not protect against them
- Rust's ownership model rules out these classes of bugs

Questions

Problems arise when combining:

**Mutability**

+

**Aliasing**

```
v.emplace_back(...)  
v.push_back(...)  
foo.field = 0x7fffffff;
```

```
auto const &x = v[0]  
auto const &it : v  
foo, &foo.field
```

Unsafe Rust

Questions

```
1 error[E0597]: `pi` does not live long enough
2     --> pi.rs:15:41
3     |
4 12 |         .map(|i| {
5     |             --- value captured here
6     | ...
7 15 |         let pi_ref: &mut f64 = &mut pi;
8     |                                 ^^ borrowed value does not live long enough
9 16 | /         thread::spawn(move || {
10 17 | |             for j in lower..upper {
11 18 | |                 let x: f64 = (f64::from(j) + 0.5) * STEP;
12 19 | |                 *pi_ref += 4.0 / (1.0 + x * x) * STEP;
13 20 | |             }
14 21 | |         })
15 | |_____ - argument requires that `pi` is borrowed for `static`
16 | ...
17 30 |     }
18 |     - `pi` dropped here while still borrowed
```

Spawned threads could live past `main()`.  
Therefore, borrowed data needs to live indefinitely.

# Adding Some Scope

```
9 let mut pi: f64 = 0.0;
10
11 thread::scope(|scope| {
12     for i in 0..NUM_THREADS {
13         let lower: u32 = THREAD_STEPS * i;
14         let upper: u32 = THREAD_STEPS * (i + 1);
15         let pi_ref: &mut f64 = &mut pi;
16         scope.spawn(move || {
17             for j in lower..upper {
18                 let x: f64 = (f64::from(j) + 0.5) * STEP;
19                 *pi_ref += 4.0 / (1.0 + x * x) * STEP;
20             }
21         });
22     }
23 });

6   |         ...
7   |         15 |             let pi_ref: &mut f64 = &mut pi;
8   |             |                                     ^^^^^^^^ `pi` was mutably borrowed here in the previous
9   |             ↪ iteration of the loop
10  |         16 | /             scope.spawn(move || {
11  |         17 | |                 for j in lower..upper {
12  |         18 | |                     let x: f64 = (f64::from(j) + 0.5) * STEP;
13  |         19 | |                         *pi_ref += 4.0 / (1.0 + x * x) * STEP;
14  |         20 | |                 }
15  |         21 | |             });
15  |         | |_____ argument requires that `pi` is borrowed for `1`
```

We can only have one mutable borrow at a time, not one per thread. This effectively makes the data race impossible.

Unsafe Rust

Questions

```
1 use std::sync::Mutex;
2 use std::thread;
3
4 fn main() {
5     const NUM_THREADS: u32 = 4;
6     const NUM_STEPS: u32 = 100_000_000;
7     const THREAD_STEPS: u32 = NUM_STEPS / NUM_THREADS;
8     const STEP: f64 = 1.0 / NUM_STEPS as f64;
9 }
```

# Adding a Mutex

```
10 let pi: Mutex<f64> = Mutex::new(0.0);
11 thread::scope(|scope| {
12     for i in 0..NUM_THREADS {
13         let lower: u32 = THREAD_STEPS * i;
14         let upper: u32 = THREAD_STEPS * (i + 1);
15         let pi_ref: &Mutex<f64> = &pi;
16         scope.spawn(move || {
17             for j in lower..upper {
18                 let x: f64 = (f64::from(j) + 0.5) * STEP;
19                 *pi_ref.lock().unwrap()
20                     += 4.0 / (1.0 + x * x) * STEP;
21             }
22         });
23     }
24 });
```

Unsafe Rust

Questions

```
1 // C-like
2 enum Dir {
3     North,
4     East,
5     South,
6     West
7 }
8 let d: Dir = Dir::East;
```

- sum type

- similar to a tagged union

```
1 // with associated data
2 enum Shape {
3     Rect { x: f32, y: f32 },
4     Circle { r: f32 }
5 }
6 let c: Shape = Shape::Circle {
7     r: 23.0
8 };
```

# Iterators

Intro to Rust

Florob

What is Rust

Ownership

Motivation

Ownership

Data Races

C++ Example

Rust Example

Features

Enums

Patterns

Iterators

Unsafe Rust

Questions

- implemented with an associated function  
`next (&mut self) -> Option<Item>`
- `for`-loops are syntactic sugar for repeatedly calling `next ()` until it returns `None`
- lots of “adapters” for functional-style programming

# Example: Iterator Adaptors

Patterns

Iterators

Unsafe Rust

Questions

- borrowing rules impose restrictions making some things impossible to express
- **unsafe** allows some additional things
  - calling functions marked **unsafe**
  - FFI calls
  - dereference arbitrary pointers
- keeps regular language semantics in place
- used to create safe abstractions
